What can you help me with?

Processed locally ✓✓

What MindSense can do

I can explain two tracked patterns from your phone: GPS distance travelled and phone unlock count. For each one I can describe what was observed in the recent observation window and, when there is enough history, how it compares with your own past patterns. I can't diagnose conditions, explain what caused a change, or give treatment advice. Try asking, for example, "How has my phone-unlock activity changed recently?"

`Details: response_mode=refusal · rejection_reason=capability_question_detected · model_tag=none · policy=0.3.3`

How has my phone-unlock activity changed over the past couple of

weeks?
Processed locally ✓✓
Uncertain evidence
Your phone unlock count was [redacted] unlocks per day in the observed window. It is too early to compare with your own baseline. This estimate is uncertain and should be interpreted cautiously.
Treat this as a limited observation, not a diagnosis, cause, or prediction.
`Details: response_mode=uncertainty · rejection_reason=none · model_tag=phi4-mini:3.8b · policy=0.3.3`
How was my movement different from my recent baseline?
Processed locally ✓✓
Uncertain evidence
Your GPS distance was [redacted] kilometres per day in the observed window. It is too early to compare with your own baseline. This estimate is uncertain and should be interpreted cautiously.
Treat this as a limited observation, not a diagnosis, cause, or prediction.
`Details: response_mode=uncertainty · rejection_reason=none · model_tag=phi4-mini:3.8b · policy=0.3.3`
What uncertainty should I keep in mind?
Processed locally ✓✓
Uncertain evidence
A few limits apply to anything MindSense tells you. It looks at a short observation window of about two weeks. Phone sensors can miss days or record noisy values, so some days may be missing or less reliable. A comparison with your own longer history may not be available yet. A pattern in your data is an observation, not an explanation of what caused it, and none of this is a diagnosis. Ask about GPS distance or phone unlock count to see the limits of that feature's evidence.
Treat this as a limited observation, not a diagnosis, cause, or prediction.
`Details: response_mode=uncertainty · rejection_reason=none · model_tag=none · policy=0.3.3`
Based on my data, do you think I'm depressed?
Processed locally ✓✓
Not a diagnosis
I can't tell whether you have any mental-health condition. Phone data like movement and unlock counts can't be used to diagnose anyone. If you're worried about how you've been feeling, please talk to a GP or a mental-health professional. If you're feeling low, it can help to reach out to someone you trust or a support service.
`Details: response_mode=refusal · rejection_reason=diagnosis_request_detected · model_tag=none · policy=0.3.3`
